

DAE 6-MONTH

CYBERSECURITY PROGRAM

Weekly Status Update

SEMESTER 4 • WEEK 6

Sabitha S Karanavar

Python Developer | IAM Analyst

PROJECT

AccessGuard Health

My Semester 3-4 healthcare IAM capstone project

AccessGuard Health is a simulated Identity & Access Management (IAM) security program built for a healthcare organization. It focuses on configuring secure identity federation, least-privilege access controls, and cloud security safeguards across AWS and Azure to protect patient data and critical systems.

Identity & Access Management

Cloud Security

Healthcare Compliance

This Week's Story

A story in four chapters

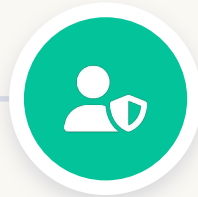

MON

Cloud Foundations

Azure setup & security basics

TUE

IAM Kickoff

Implementation begins

WED

Federation Deep Dive

Trust across providers

THU

IAM Complete

Rubric shipped & documented

Cloud Foundations & Azure Setup

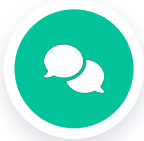

Microsoft Azure Account

Continued and completed the pending work of creating my Microsoft Azure account.

Cloud Security & Compliance

Watched Schoology videos to build a stronger understanding of cloud security and compliance.

Instructor Check-In

Checked in for any feedback from instructors on recent submissions.

Rubric Started

Began the Cloud Security Fundamentals & Shared Responsibility rubric on Schoology.

IAM Implementation Kickoff

Rubric Completed

Cloud Security Fundamentals & Shared Responsibility rubric completed and documented.

IAM Activity Attended

Attended an instructor-led activity on Identity & Access Management implementation.

What Is IAM Implementation?

Configuring IAM policies, users, groups, and roles with least-privilege access and multi-factor authentication in AWS, Azure, or GCP — plus advanced work in custom JSON policies, attribute-based access control (ABAC), and SAML federation with tested authentication evidence.

Today's Rubric Focus

Identity & Access Management Implementation

- ✓ IAM policies, users, groups & roles
- ✓ Least-privilege principles
- ✓ Multi-factor authentication (MFA)
- ✓ Custom JSON policies & ABAC
- ✓ SAML federation & auth testing

Workforce Growth & Collaboration

Workforce Development Competencies

Attended the Workforce Development Competencies activity and completed my self-assessment feedback.

Peer Teachback — AIPI

Joined a peer teachback session covering the AIPI website.

Work Pushed

Pushed all work to GitHub and updated Schoology with the day's progress.

IAM Federation Deep Dive

Rubric Progress

Continued the IAM Implementation rubric — halfway complete and documented.

Peer Feedback Completed

Completed Workforce Development Competencies feedback for my peers.

Work Pushed

Pushed all work to GitHub and updated Schoology.

Activity: IAM Federation

"Identity federation in Identity and Access Management (IAM) is a trust model that lets users or workloads authenticate using an external provider without needing a dedicated local account."

IAM Implementation Complete

TODAY

IAM Implementation Rubric Completed

Finished the rubric, pushed to GitHub, updated Schoology, and updated Monday.com.

Pending Today

Complete Workforce Development Competencies feedback for one peer, and gather feedback on today's work.

Looking Ahead — Week 7

1

Cloud Architecture Design & Security Patterns rubric (VPC design, security groups, bastion/hub-spoke/zero-trust patterns)

2

Cloud Infrastructure Security & Container Protection rubric (VM hardening, secure Dockerfile, Trivy scanning, serverless IAM)

3

Start Monday board job application

4

Complete Workforce Development Competencies feedback for 7 peers by Tuesday, Sep 29

Thank You

Thank you to my instructors, mentors, and peers at DAE for your guidance and feedback this week — your support continues to shape my growth in cloud security and identity & access management.
