IAM Ticket IAM-0003: Contractor Termination

AccessGuard Health – Healthcare IAM Operations Simulation

Ticket ID	IAM-0003
Related ticket	HVMC-JML-203 (same leaver recorded in Microsoft Entra ID)
Request type	Leaver: contractor engagement ended early
Priority	High (contractor access must be removed promptly)
Status	Resolved and closed
Date	November 3, 2026
Requester	Contractor sponsor (fictional)
Approver	IT Admin
Handled by	Sabitha S Karanavar (IT)
Employee	Carlos Diaz, contractor (fictional)

Request

The contractor's engagement has ended. Disable his account, remove his group memberships and remove all of his application access.

Systems and Account Changes

Item	Before	After
Systems	HVMC.LAN directory (Samba4 AD) on hvmc-dc01; VPN and ITAdmin shares	
Username	carlos.diaz	carlos.diaz
Account state	Enabled (userAccountControl 512)	Disabled (userAccountControl 514)
OU	OU=Contractors,OU=Users	OU=Contractors,OU=Users (kept for audit)
Group	SG-Contractors-VPN-Read	None
App access	Read-only on VPN and ITAdmin shares	None

Actions Taken

- Found the contractor and recorded the before state (account state, OU and group).
- Set a lab password for testing; before-test from the client hvmc-client01: the VPN share opened.

- Disabled the account first, then removed his group membership.
- Recorded the after state and tested again from the client.

Verification

Test	Expected	Result
Account state after	Disabled	514 (disabled)
Group membership after	None	None
Sign in after, with the correct password	Refused	Refused (NT_STATUS_ACCOUNT_DISABLED)
Account record	Kept for audit	Kept in OU=Contractors

Resolution Notes

The account was disabled before the group was removed, so there was no gap in which he could still sign in. Removing the group removed all of his app access at once, because access on-premises comes only from group membership. The account was disabled, not deleted, so the record stays available for audit. The test confirmed that even with the correct password the account cannot sign in. The same leaver was recorded in Microsoft Entra ID under HVMC-JML-203; this ticket applies it to the on-premises directory so both agree.

One command (the disable) was first run on the client machine by mistake and failed because the client has no directory database; nothing was changed, and it was repeated on the domain controller.

Evidence

The full walkthrough is in the *Contractor Termination Activity* document.

```
ubuntu@hvmc-dc01:~$ sudo samba-tool user show carlos.diaz | grep -E "^dn:|memberOf|userAccountControl"
dn: CN=Carlos Diaz,OU=Contractors,OU=Users,DC=hvmc,DC=lan
userAccountControl: 512
memberOf: CN=SG-Contractors-VPN-Read,OU=Groups,DC=hvmc,DC=lan
ubuntu@hvmc-dc01:~$
```

Figure 1: Before: account enabled (512) and in the group

```
ubuntu@hvmc-client01:~$ smbclient //hvmc-dc01.hvmc.lan/VPN -U 'HVMC\carlos.diaz' -c 'ls'
