Week 1 – Day 1 Deliverable

Healthcare IAM Operations Simulation

Defining the Organization, Workforce, Department Structure, and Project Scope

Project Name	Healthcare IAM Operations Simulation
Organization	Horizon Valley Medical Center (HVMC)
Project Week	Week 1
Day	Day 1
Document Version	1.0
Prepared By	Sabitha S Karanavar

1. Purpose

The objective of Day 1 is to establish the foundation for the Healthcare IAM Operations Simulation by defining the fictional organization, confirming the simulated workforce size, identifying the departments in scope, and documenting a clear project scope statement. This foundation ensures that all subsequent Identity and Access Management (IAM) design and operations work — including RBAC design, provisioning, and access governance — is grounded in a consistent, well-defined organizational context.

2. Organization Overview (Scenario Write-Up)

Horizon Valley Medical Center (HVMC) is a fictional community hospital created for this simulation to model realistic Identity and Access Management operations found in a healthcare environment. HVMC is simulated as a mid-sized facility with a workforce of 30 employees spanning clinical, administrative, and operational functions. The organization relies on a mix of clinical systems (such as an Electronic Health Record and Laboratory Information System) and back-office systems (such as HR, Payroll, and Finance platforms) to run daily operations. For the purposes of this project, HVMC serves as the backdrop against which IAM processes — including onboarding, role-based access provisioning, security group management, access reviews, transfers, and offboarding — will be designed, documented, and simulated.

Workforce confirmation: 30 employees total, distributed across 10 departments as outlined below.

3. Department List

Department	Employees	Function
Doctors	5	Clinical diagnosis, treatment, and patient care
Nursing	7	Direct patient care and clinical documentation
Pharmacy	3	Medication dispensing and management
Laboratory	3	Diagnostic testing and lab results processing
Human Resources	2	Employee records, onboarding, and offboarding
Finance	2	Budgeting, payroll oversight, and financial reporting
IT	3	Systems administration and technical support

Department	Employees	Function
Security	2	Physical security and incident monitoring
Reception	2	Patient check-in and appointment scheduling
Contractors	1	Temporary, limited-access external personnel
Total	**30**	

4. Project Scope Statement

This project simulates the Identity and Access Management (IAM) operations of a fictional healthcare organization, Horizon Valley Medical Center, for the purpose of building a documented, portfolio-ready demonstration of IAM analyst skills. The scope includes defining the organizational structure and departments, designing a Role-Based Access Control (RBAC) model, creating a logical Active Directory-style Organizational Unit (OU) structure, establishing a security group naming convention, and documenting the identity lifecycle processes for onboarding, transfers, and offboarding across a simulated workforce of 30 employees and 10 departments. All work products will be documented in a professional, GitHub-ready format to reflect real-world IAM operations practices.

5. Out of Scope

The following items are explicitly excluded from this project:

- Development of a custom application — all business applications referenced (EHR, Pharmacy System, LIS, etc.) are simulated names used for RBAC and access modeling purposes only.
- Real hybrid identity synchronization — no actual on-premises Active Directory to cloud directory sync (e.g., Azure AD Connect / Entra Connect) will be configured or demonstrated.
- Deployment of real production infrastructure, servers, or live directory services.
- Use of real patient data, employee data, or any actual Protected Health Information (PHI) or Personally Identifiable Information (PII).
- Integration with live third-party identity providers or Single Sign-On (SSO) platforms.

6. Key Outcomes

At the conclusion of Day 1:

- The fictional organization, Horizon Valley Medical Center, was formally defined.
- The simulated workforce was confirmed at 30 employees.
- Ten departments were identified and documented with employee distribution.
- A one-paragraph project scope statement was written.
- Out-of-scope boundaries were explicitly documented to set clear project expectations.

7. Deliverables

- One-Page Scenario Write-Up
- Department List (with employee distribution)
- Project Scope Statement
- Out-of-Scope Statement
- Day 1 Documentation for GitHub Portfolio
