IAM Ticket IAM-0001: New Nurse Onboarding

AccessGuard Health – Healthcare IAM Operations Simulation

Ticket ID	IAM-0001
Request type	Joiner: new account and role-based access
Priority	Normal
Status	Resolved and closed
Date	November 3, 2026
Requester	Nursing Manager (fictional)
Approver	IT Admin
Handled by	Sabitha S Karanavar (IT)
Employee	Emma Walsh, Nurse, Nursing department (fictional)

Request

Create a network account for a new nurse and give her the access her role needs: the EHR (electronic health record) folder, and nothing else.

Systems, Account and Groups

Item	Detail
Systems	HVMC.LAN directory (Samba4 Active Directory) on hvmc-dc01; EHR share (read/write for Nursing); Payroll share (not for Nursing)
Username	emma.walsh
Location	OU=Nursing,OU=Users
Password	Set by IT under the domain policy (minimum 12 characters, complexity, lockout after 5 attempts); not recorded in this ticket
Groups assigned	SG-Nursing-EHR-RW (group grew from 7 to 8 members)

Actions Taken

- Confirmed the account did not exist (`samba-tool user show` returned “Unable to find user”).
- Created the account in OU=Nursing with `samba-tool user create`.
- Added her to SG-Nursing-EHR-RW with `samba-tool group addmembers` and checked the group list.

- Tested from the client hvmc-client01 with `smbclient` as HVMC\emma.walsh.

Verification

Test	Expected	Result
Sign in and open EHR share	Allowed	Allowed
Open Payroll share	Refused	Refused (NT_STATUS_ACCESS_DENIED)

Resolution Notes

The account was created in the correct OU and given access only through the Nursing EHR group (least privilege). Access was verified from a client machine: EHR opens and Payroll is refused. One mistyped password during testing produced NT_STATUS_LOGON_FAILURE, which is a failed sign-in and not an access decision; the retry worked and the lockout limit of 5 was not reached.

Evidence

Screenshots of each step follow. The full walkthrough is in the *Employee Onboarding Activity* document.

```
ubuntu@hvmc-dc01:~$ sudo samba-tool user show emma.walsh
[sudo] password for ubuntu:
ERROR: Failed to get password for user 'emma.walsh': Unable to find user "emma.walsh"
ubuntu@hvmc-dc01:~$
```

Figure 1: Before: user not found

```
ubuntu@hvmc-dc01:~$ sudo samba-tool user create emma.walsh --given-name=Emma --surname=Walsh --userou="OU=Nursing,OU=Users"
New Password:
Retype Password:
User 'emma.walsh' added successfully
```

Figure 2: Account created in OU=Nursing

```
ubuntu@hvmc-dc01:~$ sudo samba-tool group addmembers SG-Nursing-EHR-RW emma.walsh
Added members to group SG-Nursing-EHR-RW
ubuntu@hvmc-dc01:~$ sudo samba-tool group listmembers SG-Nursing-EHR-RW
