SOP-IAM-01: Create Account (Joiner)

New employee or contractor gets an account with exactly the access their role needs

Project	**AccessGuard Health** — Horizon Valley Medical Center (HVMC) Healthcare IAM
SOP ID	SOP-IAM-01
Version / effective	1.0 / 9 November 2026
Owner	IAM Administrator (Sabitha S Karanavar)
Approved by	IT Security (Security Supervisor)
Review	Every 12 months, or after any incident or tooling change
Performed by	IAM Administrator (Entra role: User Administrator)
Tool	`Invoke-HvmcLifecycle.ps1` (HR feed) · RBAC v2 matrix

1. Trigger and inputs

- HR feed row `Event = Join` with a ticket number (HVMC-JML-…) and the hiring manager's approval
- Required fields: Employee ID, given name, surname, department, job title, manager's employee ID, effective date
- Contractors: sponsor (an HVMC manager) and an end date are **mandatory**; no end date = no account

2. Before you start (checks)

- Employee ID format `HVMC-<dept code><nn>` (contractors `HVMC-C<nnn>`) and not already in use
- Department exists in the RBAC v2 matrix; manager's account exists and is enabled
- User name `firstname.lastname` is unique; the start date is today or earlier (future dates wait)

3. Procedure

1. Dry run: `./Invoke-HvmcLifecycle.ps1 -HrFeed <feed>.csv`; read the plan line by line
2. Confirm the plan gives **only** the groups the RBAC matrix lists for that department and job title, nothing extra
3. Apply: `./Invoke-HvmcLifecycle.ps1 -HrFeed <feed>.csv -Apply`
4. Application access follows automatically from the groups (enterprise app sync); never assign apps by hand
5. Initial password is random, never shown or stored, and must be changed at first sign-in
6. Hand over through the help desk: password reset in person or by call-back, never by e-mail or chat
7. User signs in, sets a new password and registers Microsoft Authenticator (security defaults require MFA)

4. Verify

- Account enabled, attributes and manager correct, usage location set
- RBAC coverage check: the new user matches the matrix with 0 missing and 0 extra groups; app assignments present
- Re-running the same feed reports the event as “already done” (no duplicate account)

5. Evidence to keep

- Plan and result JSON from the run (no passwords) · ticket updated and closed with the account name and date

6. Never

✗ Copy another user's access (“make her the same as Jane”); access comes only from the matrix
✗ Send or read out a password by e-mail, chat or voicemail
✗ Give an admin role through this procedure; admin roles need a separate, approved change
✗ Create the account before HR has a record, or for a contractor without an end date

Example run: HVMC-JML-201 Olivia Bennett (20 Oct 2026, Nursing) and HVMC-JML-204 Ethan Morales (2 Nov 2026, from the HR feed) · System: Microsoft Entra ID (HVMC tenant, Free tier, security defaults on). Every change runs as a dry run first; nothing is changed without -Apply / --apply.
