SOP-IAM-02: Disable Account (Leaver)

Remove all access when someone leaves, on time, without deleting the audit trail

Project	**AccessGuard Health** — Horizon Valley Medical Center (HVMC) Healthcare IAM
SOP ID	SOP-IAM-02
Version / effective	1.0 / 9 November 2026
Owner	IAM Administrator (Sabitha S Karanavar)
Approved by	IT Security (Security Supervisor)
Review	Every 12 months, or after any incident or tooling change
Performed by	IAM Administrator (Entra role: User Administrator); daily leaver check as the safety net
Tool	`Invoke-HvmcLifecycle.ps1` (HR feed) · `Invoke-HvmcLeaverCheck.ps1` (daily)

1. Trigger

- **Planned leaver:** HR feed row `Event = Leave` with ticket, last day and end-of-shift time (UTC)
- **Urgent termination** (dismissal, security concern): request from HR or Security, confirmed by call-back to a known number; act immediately
- **Contractor end date reached:** found by the daily leaver check (warning 14 days before)

2. Procedure

1. Dry run: `./Invoke-HvmcLifecycle.ps1 -HrFeed <feed>.csv` (or `./Invoke-HvmcLeaverCheck.ps1`)
2. Check the plan: block sign-in, revoke all sessions, remove every SG-* group, remove direct app assignments
3. Apply at the leave time, not before (the person keeps working until the end of the shift): add `-Apply`
4. Remove any **Azure (RBAC) role assignments** too; disabling the account does not remove them
5. Record the leave date on the account; keep the account **disabled, not deleted** (audit and legal hold)
6. Tell the manager the access is removed; ask for handover of shared files and devices

3. Verify

- Account: sign-in blocked; sessions revoked; **0** groups; **0** application assignments; **0** Azure roles
- Run the leaver check again: “No leavers due” (nothing left to remove)
- RBAC coverage of the remaining staff unchanged; the leaver no longer appears in any group

4. Evidence to keep

- Plan, results and before/after JSON from the run · ticket closed with the time access was removed

5. Never

✗ Delete the account straight away; audit logs and investigations need it

✗ Disable only and stop there; a disabled account kept an Azure data role until the access review found it (lesson from Step 5)

✗ Use this procedure on admin or break-glass accounts (the scripts exclude them; they need a separate change)

✗ Remove access before the end of the last shift unless it is an urgent termination

Example run: HVMC-JML-203 Carlos Diaz (contractor, 20 Oct 2026) and HVMC-JML-206 Victor Mensah (2 Nov 2026, removed within 5 minutes of his shift ending) · System: Microsoft Entra ID (HVMC tenant, Free tier, security defaults on). Every change runs as a dry run first; nothing is changed without -Apply / --apply.
